

Problems with the animals

Problem	Solution	Chance to have the same problem again in a new set-up/installation	Things to take care of/to check	Suggestions
Pest (rats/mice)	Protection with hard plastic tubes, spray cables with paprika/chilli concentrate	Problem always actual	Sufficient hard plastic tubes, equipment to mount on wall	Place all cables/wires in hard plastic tubes, careful when applying spray as the concentrate is very strong, but food grade
Pigs eat cables during installation	Move pigs away if possible; install with sufficient people when not possible, spray cables with paprika/chilli concentrate	Problem always actual in pig houses	Make sure the pigs cannot reach cables [pigs can reach >>1.5m when on fences!]	Main problem = when putting cables through wall, do with >=2 installers , careful when applying spray as the concentrate is very strong, but food grade
